6-EVF-83 12V 83Ah(3hr)

12V 83Ah(3hr) VRLA GEL BATTERY

Chilwee-Graphene EVF Series VRLA Gel Battery is specially designed for electric vehicles, i.e. electric automobiles, electric road vehicles, golf cart, low speed electric cart, etc. and other devices require DC power source. The Series have add the super graphene material which adopts international leading technologies to ensure the batteries with features of long cycle life, large current discharge capability, high reliability and safety, and environmental-friendly.

FEATURES

Extra Long Life: Chilwee-Graphene EVF Series are designed with high quality grid alloy enables the grid with features of anti-corrosion, low gas emission and excellent deep cycle performance, as well as high density and special deep cycle lead paste prescription is adopted to ensure extra long cycle life. The cycle life may reach 1000+ cycles @ 50% DOD.

High Capacity and High Energy Density: Chilwee-Graphene EVF Series are designed with adequate active material and higher electrolyte density to increase the battery's capacity within certain dimension and weight, so as to keep the battery with high energy density to be compatible with most of the electric vehicle without providing extra space to install batteries.

Super graphene material inside: High strength ABS battery container and lid, perfect safety valve design, and high strength & excellent large current electroconductivity copper terminal design are adopted to ensure the Chilwee EVF Series with high reliability and safety at extreme condition.

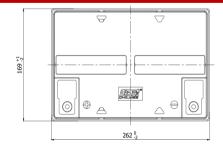

High Environmental Adaptability: Chilwee-Graphene EVF Series adopts special fumed silica Gel in electrolyte and special Gel type separator to prevent electrolyte sratification. This can significantly improve the battery's service life and environmental adptability.

Non-Cadmium Design, Environment-friendly: Chilwee-Graphene Battery has adopted internationally leading technology - container formation non-cadmium production technology, which is in the leading position in the industry. It helps to save energy 28.5%, save water 90%, and non-discharge of waste water.

TECHNICAL CURVES

CHARGE CURVE & METHOD

Charge Curve for 6-EVF-80(for Single Cell)

Voltage (V/Cell) 2. 67V 2.45V 2. 45V 2. 40V 2. 30V V3 V₆ 2. 00V I_3 Si Sz Sa Time (hours) ≤6 ≤2 ≤2 ≤2 ≤0.5 ≤4

Charge Method

- 1. Pre-charge Stage: When the battery is connected to the charger, the charger shall detect the voltage of the battery. For the battery's voltage at between V1-V2 or the battery pack is pre-charged at a current betweent I0-I1. When the battery's voltage reaches V2 or the charge time reaches S1, the charge enters into next stage. Parameters refer to Table 1, Appendix.
- 2. Constant Current Charge Stage: Charge current is I2; When the charge voltage reaches V3 or the charge time reaches S2, the charge enters into next stage. Parameters refer to Table 2, Appendix.
- 3. Constant Current Charge Stage: Charge current is I3; When the maximum voltage acches V4 or the charge time reaches S3, the charge enters into next stage. Parameters refer to Table 3, Appendix.
- 4. Constant Voltage Limited Current Charge Stage: The constant charge voltage is V4, limited current is I4. When the charge current drops to the lower limit value of I4 as Table 4 shown, or the charge time reaches S4, the charge enters into next stage. Parameters refer to Table 4, Appendix.
- 5. Trickle Charge Stage: When the charge time S2 is less than 3 hours, trickle charge is not activated. Otherwise the limited voltage is V5 the constant current is I5 or the charge time reaches S5,the charge enters into next stage. Parameters refer to Table 5, Appendix.
- **6. Float Charge Stage:** Constant voltage is V6, limited current is I6.The charger shall be cut off while the charge time is within 4 hours.Parameters refer to Table 6, Appendix.

Detailed Charging Parameters please refer to "APPENDIX II: CHARGE PARAMETERS FOR EVF SERIES"
